PROFESSIONAL SUMMARY

Full-Stack Engineer specializing in React.js, Node.js, Express.js, and MongoDB, with hands-on experience architecting production-grade web platforms — from real-time social infrastructure at scale to role-based ERP/CMS systems. Skilled in RESTful API design, JWT authentication and session security, scalable data modeling, and cost-efficient architecture.

WORK EXPERIENCE

Web Developer | ERP Tech Pro June 2026 – August 2026

- Developed and deployed business websites and ERP modules for multiple clients using React.js, Node.js, Express.js, and Tailwind CSS.
- Built reusable React components, secure authentication workflows, and CRUD/REST API integrations with role-based access control, reducing repeat development time across projects.
- Designed CMS/Admin panels enabling non-technical staff to independently manage users, business data, and website content.
- Gathered client requirements directly and translated ambiguous business needs into production-ready technical specifications.

Independent Web Developer & Mentor | Shyvora Technologies 2026 – Present

- Deliver custom web applications for small-business clients end-to-end, from requirements gathering through deployment and handoff.
- Mentor early-career developers on React.js, Node.js, and full-stack project architecture and code review practices.

Freelance Web Developer | Dev Bhoomi Group of Institutions Dec 2025 – Feb 2026

- Redesigned and deployed the official institutional website as a React SPA, cutting page load time from 9.5s to 0.3s.
- Reduced resource requests by 95% and implemented HTTP/2 for faster asset delivery.
- Improved technical SEO by fixing H1 structure, metadata, image alt attributes, and blocking JavaScript issues.

PROJECTS

OnBoard — Full-Stack Social Platform *GitHub*

Tech Stack: React.js, Node.js, Express.js, MongoDB Atlas, JWT, ImageKit, Tailwind CSS, REST APIs

- Designed a normalized messaging schema (separate membership, chapter, and message-reference junction collections) to support group roles, read pointers, and mute controls while avoiding MongoDB's 16MB document-size limit at scale.
- Built offline-resilient messaging using client-generated idempotency keys (UUIDs), local queueing, and automatic reconnect sync — eliminating duplicate and lost messages on unreliable networks.
- Engineered a zero-cost feed-ranking engine in Node.js/MongoDB using weighted engagement scoring (dwell time, replays, shares, saves) and a cohort-based cold-start ladder (50 → 500 → 5,000 users), avoiding paid LLM inference costs entirely.
- Architected dual-token JWT authentication with HttpOnly refresh sessions, IP/User-Agent–fingerprinted session management, and a privacy-first location-sharing system with auto-expiring shares and a centralized revoke-all switch.
- Shipped a 4-tier (Critical/High/Normal/Low) notification system with dwell-time read tracking, atomic grouping of bulk actions, and deep-linking, plus an SEO/editorial engine with dynamic meta and OpenGraph tags.

College ERP & CMS Platform *GitHub*

Tech Stack: React.js, Node.js, Express.js, MongoDB, Tailwind CSS, JWT, ImageKit, Axios, Vite

- Developed a full-stack university portal spanning a public website, student ERP, and CMS for managing course hierarchies, notices, and staff records.
- Implemented JWT authentication and RBAC across multi-tier user roles, with bcrypt password hashing and rate-limited API routes.
- Engineered core ERP features including attendance portals, assignment submission, syllabus repositories, and student self-service profiles.
- Optimized media and API delivery using ImageKit CDN and RESTful Express routing, deployed on Netlify & Render.

SKILLS

Languages: JavaScript (ES6+)

Frontend: React.js, Tailwind CSS, HTML5, CSS3, React Hooks, React Router, Axios, Responsive Web Design

Backend: Node.js, Express.js, RESTful API Development, JWT Authentication, RBAC

Databases: MongoDB, MongoDB Atlas, MySQL

EDUCATION

Dr. A. P. J. Abdul Kalam Technical University, Lucknow, Uttar Pradesh

Bachelor of Technology in Computer Science & Engineering | Sept 2023 – Aug 2027 (Expected)
